

TECHNICAL SUMMARY

- Having **12+ years of experience** in designing, developing, implementing, maintaining, and enhancing **enterprise-level web-based applications**.
- Strong expertise in **Microsoft .NET ecosystem**, with extensive hands-on experience in **C#, ADO.NET, ASP.NET MVC, ASP.NET Core (.NET 6/7/8)** and RESTful services.
- Proven experience working with **latest .NET technologies**, clean architecture, and scalable application design.
- Extensive experience with **LINQ, Entity Framework Core**, and ORM-based data access patterns.
- Strong understanding of **Code First, Model First, and Database First** development approaches.
- Hands-on experience in **analyzing, designing, testing, implementing, and documenting** n-tier, distributed, and enterprise applications on Microsoft platforms.
- Extensive experience in building and maintaining **Microservices architecture**, including **IdentityServer, OAuth2, JWT authentication**, and API security.
- Experience working with **SOA, Web Services, REST APIs**, and **3-tier / service-oriented architectures**.
- Expertise in **Web Development technologies** including **HTML5, CSS3, JavaScript (ES6+), XML, XSL/XSLT, SOAP**, and modern frontend frameworks.
- Strong experience with **Single Page Applications (SPA)** using **Angular (latest versions), React (latest versions)**, and component-driven UI design.
- Hands-on experience with **UI libraries** such as **Kendo UI, DevExpress**, and modern responsive design practices.
- Experience using **Dapper, Docker, RabbitMQ, Redis**, and asynchronous messaging systems.
- Designed and implemented **RESTful Web APIs** consumed by web, mobile, and third-party systems.
- Experience in **GUI design and development** using **ASP.NET Web Forms, WinForms, HTML5, CSS3**, and modern JavaScript frameworks.
- Strong understanding and implementation of **Dependency Injection, SOLID principles, and design patterns**.
- Hands-on experience in **AI-enabled application development**, including:
 - Integrating **AI/ML APIs (OpenAI, Azure AI, cognitive services)** into .NET applications
 - Implementing **AI-powered chatbots, recommendation systems, automation, and intelligent workflows**
 - Using AI for **data analysis, content generation, smart search, and business process optimization**
- Experience working on **full project life cycle** from project initiation to deployment and closure.
- Good working knowledge of **UML modeling** (Use Case, Class, Sequence, Activity diagrams).
- Extensive experience with **Object-Oriented Programming (OOP)** and enterprise application design.
- Strong experience with **MS SQL Server** including **T-SQL, performance tuning, stored procedures, triggers, functions, views, and profiling**.
- Experience working with **.NET-based CMS platforms** such as **Umbraco, DNN, Sitecore, NopCommerce, and Rainworx**.
- Experience in **build, deployment, and maintenance** of web applications and services in co-located and cloud environments.
- Excellent **communication, analytical, and problem-solving skills**, with the ability to work independently as well as in team environments.
- Proven ability to collaborate with **cross-functional teams**, manage time effectively, and handle multiple priorities.

EDUCATION

- Bachelor of Technology in Computer Science & Engineering, India – *Completed in 2013*

TECHNOLOGIES

Server Side

- Asp.Net
- MVC
- .Net 8
- C# 12
- .Net Core

PROFESSIONAL EXPERIENCE

Project: TherapyCorner, United States

Role: .Net Full Stack Developer

URL: <https://www.therapycorner.com/>

Description:

Therapy Corner is the premier EVV Practice Management for Skilled & Non-Skilled Services, an all-in-one solution for both skilled and non-skilled services that offers state and national compliance, documentation, claim accuracy, and payment agility.

Responsibilities:

- Designed and supported enterprise web applications using **ASP.NET MVC 5.0** and **Entity Framework**.
- Built responsive Line-of-Business UIs using **Bootstrap, HTML5, CSS, JavaScript**.
- Implemented **AI-powered chat assistant** for therapists and admin users to support workflow, policy, and compliance queries.
- Used **AI-driven validation and anomaly detection** to identify incomplete or inconsistent EVV entries.
- Integrated **AI services via secure REST APIs** within existing .NET architecture.
- Implemented **Autofac IoC** for dependency injection and clean architecture.
- Used **server-side caching** to improve performance and reduce database calls.
- Developed high-performance, scalable applications using **ASP.NET, C#, AJAX, SQL Server**.
- Applied enterprise **design patterns** (Repository, DI, Singleton, MVC) in n-tier architecture.
- Used **Angular** to reduce DOM manipulation and improve performance and testability.
- Administered analysis, design, development, unit testing, and documentation.
- Ensured compliance with **coding standards, security, and regulatory requirements**.
- Recommended deployment and configuration strategies to keep **test and production environments aligned**.
- Extensively used **AJAX, jQuery, and Ajax Control Toolkit** for asynchronous UI interactions.

Environment:

MS Visual Studio 2022, .Net Core, Asp.Net MVC, SSRS, Power BI, SSMS, SQL Server, JIRA, Claim Management System, OfficeAlly, ArizonaDDD, Azure Functions, Hangfire, Ticketing System,

Project: Ebev, Australia

Role: Full Stack Developer

URL: <https://www.ebev.com>

Description:

The eBev platform brings together the biggest and best range of beverage suppliers under one platform, making the ordering and accounting process for hospitality venues quicker and easier, giving back time to refocus on growing your business. Order all your beverage needs from the cellar, bar or the beach. Don't worry suppliers, you can manage all customer orders from one place from wherever you like to. No more text messages, WhatsApp or carrier pigeon order. Everything is in one place. Fully responsive for mobile use, re-order functions, product search all from the palm of your hand.

Responsibilities:

- Attended **Scrum ceremonies** and actively participated in sprint planning and reviews.
- Delivered **technical tickets** with focus on performance, scalability, and quality.
- Analyzed new requirements and created **effort estimations and technical roadmaps**.
- Designed implementation approach for new features including **AI-enabled components**.
- Developed UI components using **React and TypeScript**.
- Built **reusable shared components** to improve development efficiency.
- Integrated **AI-powered insights and automation** into existing workflows using external AI APIs.
- Deployed applications using **TeamCity CI/CD pipelines**.
- Developed reports with **AI-assisted data analysis** and export to **PDF and Excel**.
- Integrated third-party systems including **Xero, Unleash, Vinsight**, and AI services.
- Managed CMS and frontend applications.
- Developed **RESTful APIs in C# (.NET Core)** including endpoints consuming AI services.
- Implemented new application layers as per architectural specifications.
- Wrote and optimized **Stored Procedures and Views**, supporting AI-driven reporting needs.
- Integrated **AI-based alerts and intelligent notifications** with **Slack** for operational monitoring.

Environment:

MS Visual Studio 2022, .Net Core APIs, SCSS, React.js, TypeScript, SSMS, SQL Server, Mongo DB, Elastic Search, JIRA, Zoho, Docker, Gulp, Figma, TeamCity, Sitecore, Webpack, Slack, GIT, Branching System, Pull Requests

Project: Ucare, Australia

Role: Full Stack Developer

URL: <https://ucarehq.com>

Description:

UCare provides effective and easy to use all-in-one church management solution that doesn't cost the world so you can focus on ministry and loving people. Explore each powerful feature to find out how UCare handles the simplest to the most complex needs.

Responsibilities:

- Developed back-end services using .NET Core APIs, including integration with AI-powered services via REST APIs.
- Built new application modules with AI-enabled features such as intelligent automation and data insights.
- Developed React and TypeScript components, including UI integration for AI-driven results and summaries.
- Implemented AI-assisted workflows to enhance user experience and operational efficiency.
- Performed unit testing for core modules and AI-integrated components.
- Deployed applications with AI services using automated CI/CD pipelines.
- Created public-facing pages enhanced with AI-powered content generation and dynamic data rendering.
- Conducted test flights for iOS applications using Expo, including validation of AI-backed features.
- Enhanced existing modules and components to support AI-driven functionality.
- Converted Figma designs to HTML/CSS, ensuring seamless integration with AI-enabled UI components.
- Worked with background workers and Azure Functions to run AI-related processing and automation tasks asynchronously

Environment:

MS Visual Studio 2022, .Net Core, DI, Entity Framework, SQL Server, T-SQL, Stored Procedures for various data manipulation functions, React.js, TypeScript, Power BI reports, Payment Gateways, Mongo, Elastic Search, Figma, SCSS,

Project: Expak, United States

Role: Software Engineer

URL: <https://expak.com/>

Description:

Expak develops and implements technology to meet a customer's particular needs and provide the visibility we need to ensure your packages are delivered timely and securely. Our systems and data backbone provides the facts we need to maximize supply chain efficiency. Expak is an integrated full business web application for an enterprise that possesses procedures in domestic courier services. EP performs a variety of activities pertaining to the processes in the situation of a courier business. EP handles the end-to-end process starting from initiating a courier order, driver

pickup, and delivery of a courier business. EP covers all the controls and processes involved in Domestic Pickup & Delivery.

Responsibilities:

- Architected and developed applications across all phases using **.NET Core, Azure, Angular**, including **AI-enabled components**.
- Integrated **AI-powered services** using REST APIs to enhance automation, search, and reporting capabilities.
- Strong experience with **Azure Cloud services** including Virtual Machines, **Azure Functions (AI processing)**, Blob Storage, App Services, and Service Bus.
- Implemented **AI-driven background processing** using Azure Functions and Service Bus.
- Configured and maintained **Azure DevOps pipelines**, including builds, artifacts, releases, and AI service deployments.
- Integrated distributed systems such as **ADP, Dynamics 365**, and AI services within microservices architecture.
- Worked as a **Full Stack Developer**, building React.js components for Search Handler, Action Status Handler, Report Management, and **AI-assisted modules**.
- Designed and developed **microservices** for Food Handler platforms, integrating internal systems, external platforms (EDL), and **AI-powered workflows**.
- Applied **AI-based insights and intelligent validation** to improve data accuracy and operational efficiency.
- Investigated production issues, including **AI-related workflows**, and resolved them within agreed SLAs.
- Took ownership of development tasks and delivered features including **AI enhancements** within Agile sprints.

Environment:

Visual Studio 2019, ASP.NET, C#, jQuery, HTML, CSS, MSSQL, WebForms, PDFSharp, Reporting, ADO.NET, Entity Framework, Google Calendar APIs, SSIS, **Azure AI Services, REST APIs**

Project: Momentum Technologies (formerly Ungerboeck), United States

Role: Software Engineer

URL: <https://gomomentum.com/>

Description:

A powerful, end-to-end cloud platform with fully-integrated CRM, event management, accounting, reporting and modern web portals for space booking, event planning, catering and payments — all in one place. Momentum provides industry-leading event and venue management software to customers in over 50 countries around the world, serving thousands of customers that power millions of events. In the age of digital transformation, our comprehensive platform offers event professionals leading-edge SaaS technology that provides a 360 view of their business, allowing them to cut costs, save time, and increase revenue. Momentum is used for top shows from across the world, famous museums, global convention centers, performing arts venues, professional sports arenas, and other unique events. Our client list includes ExCel London, Manchester United, Museum of Contemporary Art Australia, Omanexpo, the China National Convention Center, the Porsche Experience Center in Germany and the Sydney Opera House.

Responsibilities:

Sukhdeep Kambo

Full Stack .Net Developer

Email/Teams: sukhdeepfor.net@gmail.com

Mobile / WhatsApp: (+91) 76819-67104

- Developed scalable product catalog and inventory systems using ASP.NET MVC and Entity Framework, supporting dynamic product attributes and categories.
- Implemented AngularJS for real-time product updates & seamless browsing experience, used Bootstrap for responsive design and faster UI development.

Sukhdeep Kambo

Full Stack .Net Developer

Email/Teams: sukhdeepfor.net@gmail.com

Mobile / WhatsApp: (+91) 76819-67104

- Integrated secure payment gateways (Stripe/PayPal) with .NET Core for seamless transaction processing.
- Offloaded long-running tasks to background jobs using RabbitMQ, which enhanced system responsiveness and ensured a seamless user experience by allowing users to continue interacting with the application without delays.
- Improved application performance through the refinement of SQL queries and optimization of the SQL Server database using
- Entity Framework and T-SQL stored procedures.
- Optimized the genomic search algorithm by implementing a suffix tree-based search model, which reduced genome search time by five times, enhancing overall performance and efficiency in data analysis.
- Streamlined order workflows using .NET Core APIs and SQL Server for real-time order tracking and status updates.
- Created interactive dashboards in Power BI and SQL Server Reporting Services (SSRS) for sales and customer insights.
- Enhanced user profiles with Azure Blob Storage for media management.
- Integrated automated email notifications using Azure Functions for order confirmations and shipping updates.
- Automated delivery notifications with Azure Logic Apps and Functions.
- Architected a multi-tenant platform with Azure App Services and SQL elastic pools for tenant isolation and scalability.
- Optimized performance with Azure CDN and load balancing strategies.
- Leveraged Docker for containerizing applications, enhancing development agility, improving scalability, and ensuring consistent deployment across three platforms and environments.
- Showcased proficiency in development methodologies such as Agile SCRUM and Test-Driven Development (TDD).

Environment:

Visual Studio 2019, C#, .Net Core, MSSQL, Background Services and Tasks, OAuth, HTML5, JQuery, Angular, TypeScript, Integration with third party tools, Git, JIRA,

Project: NetRefer, Malta

Role: Technical Support Specialist

URL: <https://netrefer.com/>

Description:

NetRefer is the premier iGaming Affiliate Marketing Platform Provider. Exceed industry standards with exceptionally reliable data and transformative technology. All built around our core values: Clear, Fair, Trusted.

Responsibilities:

- Worked as Middle Office, Back Office .Net Team Lead. Leading a team of dedicated professionals.
- Designed, developed, and supported several projects in Investment & Trading Financial services domain using WPF and Entity Framework in Middle office and Back Office.
- Creating enterprise architecture using C# design pattern & SOLID architecture principles.
- Used Model View Model (MVVM) design pattern in WPF using Prism framework.
- Used Third Party Controls like Telerik Controls & Rad Controls to enhance the UI experience.
- Extensively worked on C# to create design patterns and enterprise architecture of the application.
- Used WCF Ria Services to give controlled access to DB Domain service objects.
- The order management from Front to Middle to Back-office is entirely automated.
- Developed several custom adaptors which will format the data in specified format.
- Extensively used LINQ and Entity framework 6.0 for reading and updating records in the database.
- Written complex stored procedure to generate the SSRS reports & designed SSRS reports using all the SSRS tools like Table, Matrix, Chart, Sub report etc.
- Reviewed code written by junior members of the team, recommended best practices with examples. (Checking usage of proper oops concepts, code standards and guidelines).
- Provided technical recommendations to the project delivery team as per the organization's technology roadmap and supported them throughout SDLC.
- Worked closely with business stakeholders of the application.
- Developed SQL Server SSIS package for generating audit log reports.

Environment:

Visual Studio 2019 and 2022, C#, MSSQL, Multi-Tenant Architecture, Web Services, Testing and Debugging, Performance enhancement, Stored Procedure, Views, SQL Profiling, Handling Tickets, SSIS, Sitecore, Providing resolutions as per the SLA.

Project: Medline, United States

Role: Full Stack Developer

URL: <https://www.medline.com/>

Description:

Medline is a medical supply company, manufacturer and distributor that brings clinical and supply chain expertise. The continuum of care means providing consistent, integrated health services across a range of care settings. That's their clinical and supply chain experts are ready to serve every care point, from IDNs to independent care facilities. They work to achieve consistent, quality care and control costs.

Responsibilities:

- Designed and developed **Angular Material UI**, delivering requirements on time, including **AI-assisted UI features**.
 - Used **JavaScript** to integrate IVR telephony APIs along with **AI-based call insights and automation**.
 - Created **enterprise architecture** using C# design patterns and OOP principles, including **AI-ready components**.
 - Developed **Windows Services** to trigger automated PC calls, enhanced with **AI-driven call routing logic**.
 - Implemented **AI-assisted workflows** to optimize agent availability and call handling.
 - Wrote **unit test cases using NUnit** (TDD), including validation for AI-integrated modules.
 - Conducted **code reviews** ensuring best practices, clean architecture, and AI integration standards.
 - Developed **custom UI controls**, including components displaying AI-generated insights.
 - Guided team members on technical issues including **AI-enabled features and integrations**.
 - Designed and optimized **database schemas** to support AI-driven reporting and analytics.
 - Improved database performance through **indexing and table restructuring**.
-
- Created **triggers, cursors, and PL/SQL** to support intelligent data processing.
 - Wrote complex **stored procedures** and optimized queries using SQL Profiler.
 - Designed and developed applications providing **Platform-as-a-Service (PaaS)** with **AI-enabled capabilities**.
 - Implemented cloud services in .NET to process user requests and **invoke AI services**.
 - Leveraged **ASP.NET and AJAX** across applications, including AI-driven asynchronous operations.
 - Deployed and tested applications on **staging and production**, monitoring AI workflows using Application Insights

Environment:

Visual Studio 2022, C#, MSSQL, Angular, Angular Material UI, TypeScript, Reporting, VMs, Application Insights, Blob Storage, Performance Monitoring Tools, Git, Bitbucket, **AI Service APIs**, Scrum, Sprints, Agile Ceremonies.

Project: Talygen, United States

Role: Software Engineer

URL: <https://talygen.com/>

Description:

Talygen is a cross platform application that helps to automate, regulate, and enforce, corporate process with advanced features like Employee Management, Time Tracking, HR Enforcement, Invoicing, Cloud Storage, and Employee Workday Auditing.

Environment:

MS Visual Studio 2012, .Net Framework 4.5, C#, ASP.NET MVC 4, Entity Framework, LINQ, AJAX, HTML5, Java Script, JQuery, Layouts, Partial Views, SQL Server 2012, T-SQL, Stored Procedures for various data manipulation functions, SSRS, HTML5, CSS3, Extensive use of JQuery .

Project: VanillaBlue, Australia

Role: Software Engineer

URL: <https://www.vanillablue.com.au/>

Description:

Perfect catering for a corporate meeting or social occasion at home, you'll love the variety of our breakfasts & teas, lunches and platters, finger food, barbecues and buffets. We deliver catering across Sydney 6 days a week. With over 1400 online reviews, Gold License accreditation you can be confident in your catering arriving on-time and tasting amazing. At Vanilla Blue, our commitment to quality extends well beyond the food we deliver. We believe that every business must adhere to the highest standards in ethics and business practice. As such, we place enormous value on supporting people, clients, suppliers and the sustainability of our community. Working with Vanilla Blue means more than just supplying. It's a statement of support for opportunities and diversity in employment, charitable giving, and a sustainable workplace practice that not only protects our clients and employees.

Environment:

MS Visual Studio 2019, .Net Framework 4.8, C#, ASP.NET MVC, Backbone.js, TypeScript, LINQ to SQL, XML and PDF Parsing, Processing of Data, Hangfire, MSSQL, SQL Jobs, IIS, Deployment, Bitbucket, HTML5, CSS3, Webpack, Gulp

Project: Munilogic, United States

Role: Technical Support Specialist

URL: <https://munilogic.com/>

Description:

MuniLogic is a customizable innovative digital municipal management software enables small to mid-sized local governments to achieve their goals and objectives. This consists of integrated modules such as Customer, Code, Permit, Property, License, Zoning, and Roadway.

Environment:

C#, Microsoft Visual Studio, Asp.Net Web Forms, JQuery, Reporting, SQL Jobs, ZOHO, SQL Reporting Services, SOAP Services, Consuming APIs

Project: PattersonCompanies, United States

Role: Technical Support Specialist

URL: <https://www.pattersoncompanies.com/>

Description:

Patterson Companies, Inc. is focused on providing the best products, technologies, services and business solutions to the animal and oral health markets. Our comprehensive portfolio, distribution network and supply chain are equaled only by our focused and passionate people.

Environment:

C#, VS 2019, Angular, Entity Framework, REST APIs development, TypeScript, MSSQL, Elastic Search, 3rd Party Tools, Stored Procedures Development, Tuning SQL Queries

Project: SchoolPro (Sirius), Australia

Role: Software Engineer

Description:

Sirius is a vast, robust and high performing desktop product which was built to maintain the entire system of the schools. DevExpress controls were employed into it as per requirements of the client. This system stores the complete detail of faculty and students present in a particular school and maintain them in database. In addition, it also let the school administrator to keep track of fees of wards and examination results. DevExpress reports were implemented to present data to the end user in a specific form.

Environment:

C#, Microsoft Visual Studio 2012, .Net Framework 4.0, VB.Net ,Idea Blade, DevForce, LINQ, Windows Forms, SQL Server 2008, T-SQL.

Project: Charger, Canada**Role: Software Developer**

URL: <https://www.chargerlogistics.com/>

Description:

Charger's expedited service provides time-critical freight solutions to some of North America's largest manufacturers. We've gained a reputation as an industry-leading expeditor in the automotive sector and have had years of experience delivering time sensitive shipments. Whether you're delivering a single pallet or an entire truckload, we guarantee that your shipments will always arrive on time. Charger uses cutting-edge route optimization software, mobile solutions, and precise internal systems to improve delivery rates and minimize delays. Customers can also track their shipments in real-time and receive regular status updates from our carrier drivers.

Environment:

Visual Studio 2022, .Net Core APIs, Authentication, Identity, Dependency Injection, IoC, SOC, Micro Services Architecture, Aggregate Gateway, Kafka Events, Logging, Unit Tests, Swagger.

Project: ProviderTech, United States**Role: Full Stack Developer**

URL: <https://www.providertech.com/>

Description:

Helping patients overcome obstacles to quality healthcare isn't always easy. How do we know? We've been in your shoes. Prior to joining ProviderTech, our team has worked all across the healthcare field from clinical settings ranging from acute to ambulatory care, extending into operations and technology.

Environment:

MS Visual Studio 2019, .Net Framework 4.8, C#, ASP.NET MVC, Backbone.js, TypeScript, ABP.IO, LINQ to SQL, XML and PDF Parsing, Processing of Data, Hangfire, MSSQL, SQL Jobs, IIS, Deployment, Bitbucket, HTML5, CSS3, Webpack, Gulp
